

Building Organizational Discernment

Connect and govern everything that is yours.

Turn institutional memory into living organizational intelligence.

Purpose

Onvisia exists to help organizations flourish by placing relationship at the center of intelligence, technology, and decision-making.

Value Proposition

We help organizations capture, connect, and put their collective intelligence to work—so leaders can decide and govern with institutional memory instead of starting from zero.

ABOUT ONVISIA INC.

Onvisia Inc. is an AI research and development company delivering the Onvisia Discernment™ Platform— a relationship-centered platform for the AI era. We connect knowledge, processes, policies, people, and decisions into a living, persistent model of how the organization actually works.

Technology

Four provisional patent applications filed April 2026 — Autonomous AI, knowledge governance, organizational intelligence. SBIR-NSF Project Pitch under review — Investigating Relationship Graphs: Quantum-Accelerated Inference

Relationship

Relationship is central to the human experience. We make it central to organizational intelligence. This is where Onvisia plants its flag.

Compounding Horizontal Adoption

Every modeled relationship can become a governed network of connections. Serving enterprise, public sector, professional services, and faith-based and mission-driven institutions.

Long-Term Durability

We are an AI R&D company built around enduring organizational needs — truth, trust, relationships, coherence, and governance — rather than any single AI model or trendy technology.

WHY ONVISIA?

WHY NOW?

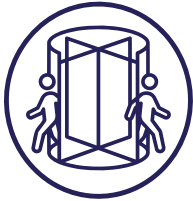

AI WITHOUT CONTEXT CANNOT BE GOVERNED

Without common context and relationship, AI delivers answers that cannot be governed.

DECISIONS FAIL ON RELATIONSHIPS

Not on data. They fail when someone ignores an obligation, exceeds their authority, or never sees who is affected.

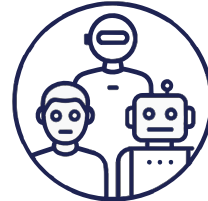

MEMORY WALKS OUT THE DOOR

The knowledge that made the organization work leaves with the people who retire.

THE RULES NOW HAVE DATES

EU AI Act · NIST AI RMF · ISO/IEC 42001 · Texas SB 1822. Explainable, traceable decisions are becoming obligations on a published schedule.

AI IS ALREADY RUNNING INSIDE YOUR COMPANY

Most organizations cannot name every AI system in use. You cannot govern what you cannot see.

THE TOOLING ARRIVED LATE

The requirement came before the market did. The organizations that model this first will not be the ones catching up.

Onvisia turns institutional complexity into clarity, collective intelligence into governed action, and purpose into lasting impact.

BUILT & TESTED FOUNDATION · RUNTIME IMPLEMENTATION UNDERWAY · HUMAN DECISION AUTHORITY REMAINS HUMAN
